ATTESTATION

PT2 Efficacy-Products Vulkan Max & Vulkan Max+

Vulkan Max and and Vulkan Max+ have been evaluated according to the European BPR efficacy requirements applicable to PT2 airborne disinfection.

The products have successfully demonstrated efficacy against the official PT2 reference microorganisms required by the relevant European airborne disinfection standards. These reference microorganisms have been selected by regulators to represent the microorganisms of concern within PT2 applications.

Consequently, Vulkan Max and Vulkan Max+ comply with the efficacy requirements established for PT2 airborne disinfection and are suitable for use in hygiene and biosecurity programmes for greenhouses, storage facilities and other non-food, non-animal environments, including those associated with potato production and handling.
